MAPCON ScanMaint™ is an effective tool for *reducing* data entry time and costly errors while *boosting* productivity.

ACCURACY

Key areas in your maintenance organization can use **ScanMaint** to improve speed and accuracy in day-to-day data entry activities, leading to more reliable data. All the capabilities described below come in a single module that is easy to install and maintain.

WHY USE **ScanMaint**?

- ⇒ Storeroom Issues & Returns
- ⇒ Physical Inventory Counting
- ⇒ Storeroom Receiving
- ⇒ Meter & Gauge Reading
- ⇒ Equipment Inspections
- ⇒ Create Work Orders

FLEXIBILITY

Design your own barcode labels with the included Label Matrix™ software. **ScanMaint** allows you to print barcodes on reports, issue/return tickets and work order forms.

RELIABILITY

*Increase speed
and accuracy
with MAPCON's
easy to use
Barcode utility*

Datamax™ Barcode Printer

**Reduce the time it takes
to count your Inventory!**
MAPCON ScanMaint™
makes it quick and easy!

Why do I need to use MAPCON ScanMaint™?

Storeroom Issues and Returns

Barcodes allow parts to be scanned and issued to work orders quickly and easily with minimal mistakes. Returns are processed just as conveniently.

Storeroom Receiving

Print barcodes automatically for new parts at the time of receipt.

Physical Inventory Counting

Count parts in half the normal time, and virtually eliminate data entry errors using barcoded aisles, shelves, and bins. **Combine with *PocketMaint Batch* or *Wireless* to transfer inventory counts from a handheld PDA into MAPCON!**

Meter and Gauge Readings

Barcoded Equipment helps workers to quickly scan the correct machine number and enter readings without guesswork. **Combine with either version of *PocketMaint* to easily collect readings on a handheld PDA!** Once readings are uploaded, MAPCON will create a PM work order during the next PM generation if a reading is outside set limits.

Equipment Inspections

Barcoded Equipment allows inspectors to quickly scan the correct machine number, eliminating wasted effort trying to verify numbers. **Combine with *PocketMaint Wireless* and add the ability to see equipment history while standing next to the machine!**

Create Work Orders

Scan equipment number to quickly create a work order for that machine. **Combine with *PocketMaint Batch* or *Wireless* to add the ability to create a work order while out in the field!**

What hardware do I need?

Scanner

Use any MS Windows enabled scanning device.

Printer

Any Label printer supported by Label Matrix, including HP Laserwriters, Datamax, plus many others.

Optional: PDA

Optionally use any handheld PDA using MS PocketPC or CE.NET to combine *ScanMaint* with *PocketMaint* for the ultimate in mobility and flexibility.

How do I create labels?

MAPCON ScanMaint comes complete with *Label Matrix™*. With *Label Matrix* you choose what information is included as you custom design your own labels. This handy software utility will help you quickly setup your parts and storerooms for barcoding.
