Upgrade Release Notes for MAPCON 6.4.0 Last Update: July 2018

6.4.0 Released: 11/10/2017 6.4.1 Released: 08/03/2018 6.4.2 Released: 10/31/2018

Version	NEW MODULES / MAJOR ENHANCEMENTS	Module
6.4.2	Improved Quick Report Generator	Adv. Sys Utils
6.4.0	Tool Control	Adv. Maint
6.4.0	Checklists	Adv. Maint
6.4.0	Drag-Drop Menu Editor / User My Menu Management	Adv. Sys Utils

	GENERAL		
6.4.2	The system will automatically go to record browse mode when encountering a locked record.	Both	
6.4.2	Added an Excel icon to most lookups, allowing users to create excel spreadsheets from lookups, including any filtered options.	Pro	
6.4.2	Added instructional; video icons for all areas for attachments.	Both	
6.4.2	Updated MBIRT reporting to allow for extremely large SQL queries.	Both	
6.4.1	Added Several new product videos for Tool Control, Checklists, Menu Management, Work Requests and Work Orders. Added product videos option to the Help menu.	Both	
6.4.1	Correctly end server-side tasks when a report is canceled.	Both	
6.4.0	Do not remove non-cascading detail records when marking a record inactive.	Both	
6.4.0	Corrected bottom menu button display when workstation has a DPI display setting over 100%.	Both	
6.4.0	Simplified report runner process by reducing interface to a single screen.	Both	
6.4.0	Added new video content for utilities, barcode and more.	Both	
6.4.0	Updated 40+ stock reports to MBIRT.	Both	
6.4.0	Strengthened site access restrictions for users with browse only site access.	Pro	
	HUMAN RESOURCES		
6.4.2	Correctly filter employee only lookup by site on user data entry window.	Pro	
6.4.2	Correctly filter labor compensation lookup filter by site.	Pro / Adv HR	
6.4.2	Allow labor compensation codes to be made inactive.	Pro / Adv HR	
6.4.0	When entering timecards directly, do not allow users to enter timecards for other employees unless they have that authority assigned to them.	Pro / Adv HR	
6.4.0	Do not require a revision comment when a user updates their preferences.	Pro / Adv HR	

	INVENTORY	
6.4.2	Remove Vendor requirement on Inventory data Entry	Pro
6.4.2	Include partially received amounts for reorder calculations on open Purchase Orders.	Adv Inv.
6.4.2	Do not allow issues to be saved with invalid part / stockroom combinations.	Adv Inv.
6.4.2	Corrected break when adjusting more than one weighted average item at a time.	Adv Inv.
6.4.1	Corrected issue process if there were duplicate part/stockroom entries. The system did not correctly update the item's QOH or create the correct audit records.	Adv Inv.
6.4.1	Corrected manual reorder break when ordering an item with a vendor part # over 25 characters.	Adv Inv.
6.4.1	Corrected issue when selecting multiple items for a stockroom transfer and getting an error one of the selected items. In this scenario, all of the items transferred quantity when to the first item on the list.	Adv Inv.
6.4.1	Do not update unapproved requisitions in other sites during the automatic reorder process, even if the vendors are the same.	Adv Inv.
6.4.1	On weighted average based systems, the cost amount in inventory audit was zero for tickets processed from after the fact work orders. Call MAPCON support for assistance in correcting the data.	Adv Inv.
6.4.1	Fixed incorrect error messages after using the BOM button option on the issue data entry window.	Adv Inv.
6.4.0	When creating locations for a stockroom, prompt to remove blank locations when generating more than one location.	Adv Inv
6.4.0	Improved inventory import process: Stockroom auto-add is corrected. Corrected price import. Can Import specifications.	Both
6.4.0	Add switch to allow the system to auto generate for parts when the minimum QOH is at zero.	Adv Inv
6.4.0	Do not allow duplicate alternate parts.	Adv Inv
6.4.0	Added category filter when printing cycle count sheets	Adv Inv
6.4.0	Removed barcode module only restriction for stockroom location filters (ASB filters) on inventory lookups. Still requires Advanced Inventory.	Both
6.4.0	Corrected wrapping on detail rows that could cause mismatched lines on the issue form.	Adv Inv
6.4.0	Correctly output adjustment amount for GP interface for cycles and wtvg systems.	Adv Inv
6.4.0	Do not send adjustment amount in GP interface when doing a stockroom transfer and both stockrooms have the same GP account #.	Adv Inv
6.4.0	When doing a cycle count, only reorder from the counted stockroom instead of for all stockrooms on a part even if they are below their minimum thresholds.	Adv Inv
6.4.0	Cycles can now be inactivated.	Adv Inv
6.4.0	Added Category Codes to Cycle Counts	Adv Inv
6.4.0	Added Class Codes to Cycle Counts	Adv Inv
6.4.0	Added option to include / exclude Non-Valued Items to cycle counts.	Adv Inv
6.4.0	Added option it include / exclude or only count Consignment items to cycle counts.	Adv Inv
6.4.0	Added separate audit transaction code for stockroom transfers.	Adv Inv
6.4.0	Do not allow issues with a quantity requested of zero against work orders, which could cause work orders to not be able to complete.	Adv Inv
6.4.0	Added cancel button to issue ticket data entry to cancel open or partial tickets.	Adv Inv
6.4.0	Prompts for number of labels when printing barcodes from the inventory window	Adv Inv / Bar
6.4.0	Added last cycle count date, time, user, quantity counted, difference, and accuracy % to inventory data entry.	Adv Inv
6.4.0	Added Inventory count accuracy and item last counted reports.	Adv Inv

6.4.2 Work Request e-mail read interval increased to 20 minutes for gmail accounts to avoid getting shut out for too many access times. 6.4.2 Display work request # in bottom right when saved from desktop initiation window. 6.4.2 Do not clear the zone drop down when creating work requests from the HTML propage. 6.4.2 Corrected cases where work requester submitted was blank in e-mail notifications. Propage. 6.4.2 Corrected multiple work order option for date last done PMs. 6.4.1 Corrected multiple work order option for date last done PMs. 6.4.1 Corrected multiple work order option for date last done PMs. 6.4.1 Corrected procedures on the PM Forecasting report if they are not approved. 6.4.1 Correctly print multiple job steps on the work order form. Corrected dispatched user "disappearing" on the work order form after the 6.4 upgrade. 6.4.1 Corrected break when making equipment record changes with the equipment revision history log enabled. 6.4.1 Corrected lookup when browsing active PMs. Also removed buttons that could cause changes to the record (primarily attachments) 6.4.1 No longer displays duplicate values when refreshing the equipment hierarchy lookup. 6.4.1 Added the PM frequency multiplier to the PM forecast report. 6.4.1 Correctly display PM and Cycle PM information for work orders tripped by meters on Cycle PMs. 6.4.1 Correctly display PM and Cycle PM information for work orders tripped by meters on Cycle PMs. 6.4.1 Corrected offinition overlay on the frequency. 6.4.1 Corrected conditions that could cause printing work order forms with checklists to lock up. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected ore the by by Month, PM On-time compliance report, Work Request		MAINTENANCE	
6.4.2 Display work request # in bottom right when saved from desktop initiation window. 6.4.2 Do not clear the zone drop down when creating work requests from the HTML. Pro page. 6.4.2 Corrected cases where work requester submitted was blank in e-mail notifications. Pro 6.4.1 Corrected multiple work order option for date last done PMs. 6.4.1 Corrected multiple work order option for date last done PMs. 6.4.1 Corrected multiple work order option for date last done PMs. 6.4.1 Correctly print multiple jobs steps on the PM Forecasting report if they are not approved. 6.4.1 Corrected break when making equipment record changes with the equipment revision history log enabled. 6.4.1 Corrected lookup when browsing active PMs. Also removed buttons that could cause changes to the record (primarily attachments). 6.4.1 No longer displays duplicate values when refreshing the equipment hierarchy lookup. 6.4.1 Correctly deplay PM and Cycle PM information for work orders tripped by meters on Cycle PMs. 6.4.1 Correctly generate attachments specifically assigned to equipment on a PM via the extended definition overlay on the frequency. 6.4.1 Corrected conditions that could cause printing multiple forms. 6.4.1 Corrected conditions that could cause printing work order swork order without a priority. 6.4.1 Corrected above the refreshing the equipment on a PM via the extended definition overlay on the frequency. 6.4.1 Corrected above the property of	6.4.2	Work Request e-mail read interval increased to 20 minutes for gmail accounts to	Both
6.4.2 Do not clear the zone drop down when creating work requests from the HTML page: 6.4.2 Corrected cases where work requester submitted was blank in e-mail notifications. Pro 6.4.2 Added ability to import departments. Pro 6.4.1 Corrected multiple work order option for date last done PMs. Both 6.4.1 Done include PM procedures on the PM Forecasting report if they are not approved. 6.4.1 Correctly print multiple job steps on the work order form. Corrected dispatched user "disappearing" on the work order form after the 6.4 upgrade. 6.4.1 Corrected break when making equipment record changes with the equipment revision history log enabled. 6.4.1 Corrected break when making equipment record changes with the equipment revision history log enabled. 6.4.1 Corrected of the process of the record (primarily attachments) 6.4.1 No longer displays duplicate values when refreshing the equipment hierarchy lookup. 6.4.1 Added the PM frequency multiplier to the PM forecast report. 6.4.1 Added the PM frequency multiplier to the PM forecast report. 6.4.1 Correctly display PM and Cycle PM information for work orders tripped by meters on Cycle PMs. 6.4.1 Correctly display PM and Cycle PM information for work orders tripped by meters on Cycle PMs. 6.4.1 Correctly display expensive the requency. 6.4.1 The bar code on the work order form does not move across the page when printing multiple forms. 6.4.1 Corrected conditions that could cause printing work order forms with checklists to lock up. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected to allow fore fiscally with provided acquipment type filter to equipment made and type to Added Account # to PM frequency definition. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected to MBIRT: Completed PMs by Month,		· ·	
6.4.2 Corrected cases where work requester submitted was blank in e-mail notifications. Pro 6.4.1 Corrected multiple work order option for date last done PMs. Both 6.4.1 Corrected multiple work order option for date last done PMs. Both 6.4.1 Corrected multiple work order option for date last done PMs. Both 6.4.1 Correctly print multiple job steps on the work order form. Corrected dispatched user disappearing on the work order form after the 6.4 upgrade. 6.4.1 Corrected break when making equipment record changes with the equipment revision history log enabled. 6.4.1 Corrected lookup when browsing active PMs. Also removed buttons that could cause changes to the record (primarily attachments) 6.4.1 No longer displays duplicate values when refreshing the equipment hierarchy lookup. 6.4.1 No longer displays duplicate values when refreshing the equipment hierarchy lookup. 6.4.1 Correctly display PM and Cycle PM information for work orders tripped by meters on Cycle PMs. 6.4.1 Correctly generate attachments specifically assigned to equipment on a PM via the extended definition overlay on the frequency. 6.4.1 Corrected conditions that could cause printing multiple forms. 6.4.1 Corrected above the work order form does not move across the page when printing multiple forms. 6.4.1 Corrected above the work order work order without a priority. 6.4.1 Corrected above the work order work order without a priority. 6.4.1 Corrected above deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected both or the work order work order without a priority. 6.4.1 Corrected both or the work order work order without a priority. 6.4.1 Corrected both or the work order work order without a priority. 6.4.1 Corrected both or the work order work order without a priority. 6.4.1 Corrected both or the work order work order without a priority. 6.4.1 Corrected both or the work order work order without a priority. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected to allow deleting	6.4.2	Display work request # in bottom right when saved from desktop initiation window.	Both
6.4.2 Corrected cases where work requester submitted was blank in e-mail notifications. Pro 6.4.2 Added ability to import departments. Pro 6.4.1 Done include PM procedures on the PM Forecasting report if they are not approved. 6.4.1 Correctly print multiple job steps on the work order form. Corrected dispatched user "disappearing" on the work order form after the 6.4 upgrade. 6.4.1 Corrected break when making equipment record changes with the equipment revision history log enabled. 6.4.1 Corrected break when making equipment record changes with the equipment revision history log enabled. 6.4.1 No longer displays duplicate values when refreshing the equipment hierarchy lookup. 6.4.1 Added the PM frequency multiplier to the PM forecast report. 6.4.1 Added the PM frequency multiplier to the PM forecast report. 6.4.1 Correctly generate attachments specifically assigned to equipment on a PM via the extended definition overlay on the frequency. 6.4.1 The bar code on the work order form does not move across the page when printing multiple forms. 6.4.1 Correct case where follow up work orders would generate a work order without a priority. 6.4.1 Corrected allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected loallow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Added Account # to PM frequency definition. 6.4.1 Corrected to allow deleting with reports, open work order reports. 6.4.1 Added Account # to PM frequency definition. 6.4.1 Corrected to allow of the frequency definition. 6.4.1 Corrected to allow of the frequency definition. 6.4.1 Corrected to allow deleting inactivating) cost centers with fiscal period costs. 6.4.1 Added Account # to PM frequency definition. 6.4.1 Corrected to allow of the frequency definition. 6.4.1 Corrected to allow deleting from the frequency definition. 6.4.1 Corrected to allow deleting from the frequency definition of the frequency definition of the	6.4.2	Do not clear the zone drop down when creating work requests from the HTML	Pro
6.4.1 Corrected multiple work order option for date last done PMs. Both 6.4.1 Done include PM procedures on the PM Forecasting report if they are not approved. 6.4.1 Correctly print multiple job steps on the work order form. Corrected dispatched user "disappearing" on the work order form after the 6.4 upgrade. 6.4.1 Corrected break when making equipment record changes with the equipment revision history log enabled. 6.4.1 Corrected lookup when browsing active PMs. Also removed buttons that could cause changes to the record (primarily attachments) 6.4.1 No longer displays duplicate values when refreshing the equipment hierarchy lookup. 6.4.1 Added the PM frequency multiplier to the PM forecast report. 6.4.1 Correctly display PM and Cycle PM information for work orders tripped by meters on Cycle PMs. 6.4.1 Correctly generate attachments specifically assigned to equipment on a PM via the extended definition overlay on the frequency. 6.4.1 The bar code on the work order form does not move across the page when printing multiple forms. 6.4.1 Corrected conditions that could cause printing work order forms with checklists to lock up. 6.4.1 Corrected conditions that could cause printing work order forms with checklists to lock up. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected to allow deleting (inactivating) cost centers with fiscal period costs. 6.4.1 Corrected PMs by Month, PM On-time compliance report, Work Request Analysis, Project Detail/Summary reports, open work order reports. 6.4.1 Added Account # to PM frequency definition. 6.4.1 Corrected labor cost display on project costs tab when using timecards. 6.4.0 Added Equipment Type to define the type of asset (fixed, vehicle, tool, etc.) Added equipment type to define the type of asset (fixed, vehicle, tool, etc.) Added equipment type to define the type of asset (fixed, vehicle, tool, etc.) Added equipment type to define the type of asset (fixed, vehicle, tool, etc.) Added equipment Type to define the type of		page.	
6.4.1 Corrected multiple work order option for date last done PMs. Both 6.4.1 Done include PM procedures on the PM Forecasting report if they are not approved. 6.4.1 Correctly print multiple job steps on the work order form. Corrected dispatched user 'disappearing' on the work order form after the 6.4 upgrade. 6.4.1 Corrected break when making equipment record changes with the equipment revision history log enabled. 6.4.1 Corrected lookup when browsing active PMs. Also removed buttons that could cause changes to the record (primarily attachments) 6.4.1 No longer displays duplicate values when refreshing the equipment hierarchy lookup. 6.4.1 Added the PM frequency multiplier to the PM forecast report. 6.4.1 Added the PM frequency multiplier to the PM forecast report. 6.4.1 Correctly display PM and Cycle PM information for work orders tripped by meters on Cycle PMs. 6.4.1 Correctly generate attachments specifically assigned to equipment on a PM via the extended definition overlay on the frequency. 6.4.1 The bar code on the work order form does not move across the page when printing multiple forms. 6.4.1 Corrected case where follow up work orders would generate a work order without a priority. 6.4.1 Corrected conditions that could cause printing work order forms with checklists to look up. 6.4.1 Corrected labor cost display on project costs tab when using timecards. 6.4.1 Corrected labor cost display on project costs tab when using timecards. 6.4.1 Corrected PMs by Month, PM On-time compliance report, Work Request Analysis, Project Detail/Summary reports, open work order reports Both Competition to the Equipment Type to define the type of asset (fixed, vehicle, tool, etc.) Added equipment type to define the type of asset (fixed, vehicle, tool, etc.) Added equipment type to define the type of asset (fixed, vehicle, tool, etc.) Added equipment type to define the type of asset (fixed, vehicle, tool, etc.) Added equipment type to define the type of asset (fixed, vehicle, tool, etc.) Added equipment type to define th	6.4.2	Corrected cases where work requester submitted was blank in e-mail notifications.
